

How to Fill the ADR Form

A step-by-step exam-oriented guide (Second Year MBBS practical) with a worked case

Case Narrative

Patient	Ramesh Patel
Age / Sex / Weight	32 years, male, 65 kg
Diagnosis	Acute bacterial sinusitis
History	No allergy; no family history of diabetes or hypertension
Drug given	Tab. Amoxicillin 500 mg, three times a day, for 5 days
Therapy started	1 March 2026
Reaction onset	3 March 2026 — generalized itching and skin rashes over chest
Action taken	Drug stopped same day; treated with antihistamines
Recovery	Complete recovery by 6 March 2026

1. Patient Information

- **Initials only** — write RP, not the full name (maintains confidentiality)
- Age: 32 years Sex: tick male Weight: 65 kg

2. Suspected Adverse Reaction

- Date reaction started: 3 March 2026
- Date of recovery: 6 March 2026
- Describe reaction: generalized itching and skin rashes over the chest, starting after amoxicillin

3. Suspected Medication(s)

Field	Entry
Drug name	Amoxicillin
Manufacturer / batch / expiry	As given in case (not provided here)
Dose used	500 mg
Route	Oral
Frequency	TID (three times a day)
Therapy dates	Started 1 March 2026 — Stopped 3 March 2026

Reason for use / indication	Acute bacterial sinusitis
-----------------------------	---------------------------

Common exam mistake: students write the *reaction* dates here instead of the drug's therapy dates — check carefully which section you are filling.

4. Dechallenge and Rechallenge

- Reaction abated after stopping the drug or reducing the dose? → **Yes** (reaction disappeared after amoxicillin was stopped)
- Reaction reappeared on reintroduction (rechallenge)? → **Not applicable** — drug was not restarted

5. Concomitant Medication, Lab Data and Medical History

- Concomitant medical products / self-medication / herbal remedies (excluding treatment for the reaction): **not applicable** — only amoxicillin was prescribed
- Relevant test / laboratory data: **not applicable** — none provided in this case
- Relevant medical/medication history (allergies, pregnancy, smoking, alcohol, hepatic/renal dysfunction): no known drug allergy

6. Seriousness and Outcome

- Seriousness: **not serious** in this case. Tick 'serious' only if it caused death, was life-threatening, caused/prolonged hospitalization, disability, congenital anomaly, or required intervention to prevent permanent damage.
- Outcome: **recovered** (other options: fatal, continuing, recovering, unknown, other)

7. Reporter Details

- Name and professional address, PIN code, email, contact number
- Signature, occupation
- Causality assessment (if able) and date of report

Classification of This Case

This case is a **Type B ADR** — unpredictable and not dose-dependent.

Essential Information for ADR Reporting (VigiFlow / NCC)

1. Patient initials
2. Date the reaction started
3. Description of the reaction / problem
4. Name of the drug
5. Concomitant medications
6. Outcome of the reaction
7. Name of the reporter
8. Date of the report

Key Points to Remember

- Patient identity is kept strictly confidential throughout the process
- Submitting a report is **not** an admission that the drug, manufacturer, or medical personnel caused the reaction
- Submitting an ADR report carries **no legal implication** for the reporter
- Proper ADR reporting supports patient safety and drug monitoring
